Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	• Collect rainfall and weather data. • Enter cloud visibility and seasonal rainfall values. • Submit data through the web application.	• View the predicted flood risk. • Check the confidence/accuracy of the prediction. • Identify high-risk areas.	• Issue flood warnings. • Plan evacuation and rescue operations. • Monitor the situation continuously.
Touchpoint <i>What part of the service do they interact with?</i>	• Flask Web Application • Weather Data Input Form • Historical Weather Dataset	• Machine Learning Prediction Model • Prediction Dashboard • Flood Risk Report	• Alert Notifications • Disaster Management Dashboard • Decision Support System
Customer Thought <i>What is the customer thinking?</i>	• Is the entered weather data accurate? • Will the system predict correctly? • Can this help prevent floods?	• Which areas are at highest risk? • How reliable is the prediction? • Should immediate action be taken?	• How can we reduce damage? • Are rescue resources sufficient? • Have all affected people been alerted?

Customer Feeling <i>What is the customer feeling?</i>	• Hopeful • Curious • Attentive	• Concerned • Confident in the prediction • Alert	• Responsible • Prepared • Relieved after taking preventive action
Process Ownership <i>Who is in the lead on this?</i>	• Meteorologist • Weather Data Analyst • Data Collection Team	• Machine Learning Model • Data Scientist • System Administrator	• Disaster Management Authority • Government Officials • Emergency Response Team
Opportunities <i>How can we improve this stage?</i>	• Integrate real-time weather sensors. • Improve the quality of weather data. • Automate data collection.	• Improve model accuracy using more datasets. • Reduce prediction time. • Continuously retrain the ML model with new data.	• Send instant SMS/mobile alerts. • Provide real-time flood maps. • Integrate with emergency response systems for faster action.
